Subject: ITB #2455-B: Starrs Mill School Tunnel Construction
Addendum #1

Gentlemen/Ladies:

Below, please find responses to questions, clarification, or additional information for the above referenced **ITB**. You will need to consider this information when preparing your bid.

1. Please find question concerning drainage at Wall 3. The plans indicate removing the headwall & capping off the existing drainage pipeline (Drawing 13-02) at Station 27+50 +/- O/S 50 RT. This existing pipe has an invert of 825.20 and is draining the low spot away from the site (inlet headwall). Wall 3 profile show maintaining this low spot, but the plans do not address draining this low spot? Should we assume that we will end up utilizing the existing pipe for drainage thus having to remove and replace or add a drainage structure and pipe accordingly to drain into ST C2?

No additional drainage structures are expected. The existing topography typically falls away from the proposed Cut line shown in this area, creating a slight ridge. It is anticipated that the final backslope will cover the capped existing pipe. In the smaller localized area of the existing headwall, the contractor shall ensure final grading will provide a constant slope from the ridge line to the approximate back of wall. In addition, an updated Grading Plan to replace plan sheet 18-02 is attached as part of this addendum (Attachment 1).
